

Notify.io is your global web notification system.

Real-time notifications of events from the web, under your control.

You get pushed notifications

- Works with major desktop notifiers
- Instant setup for participating sites
- History, filtering*, and routings*

[Get Started](#)

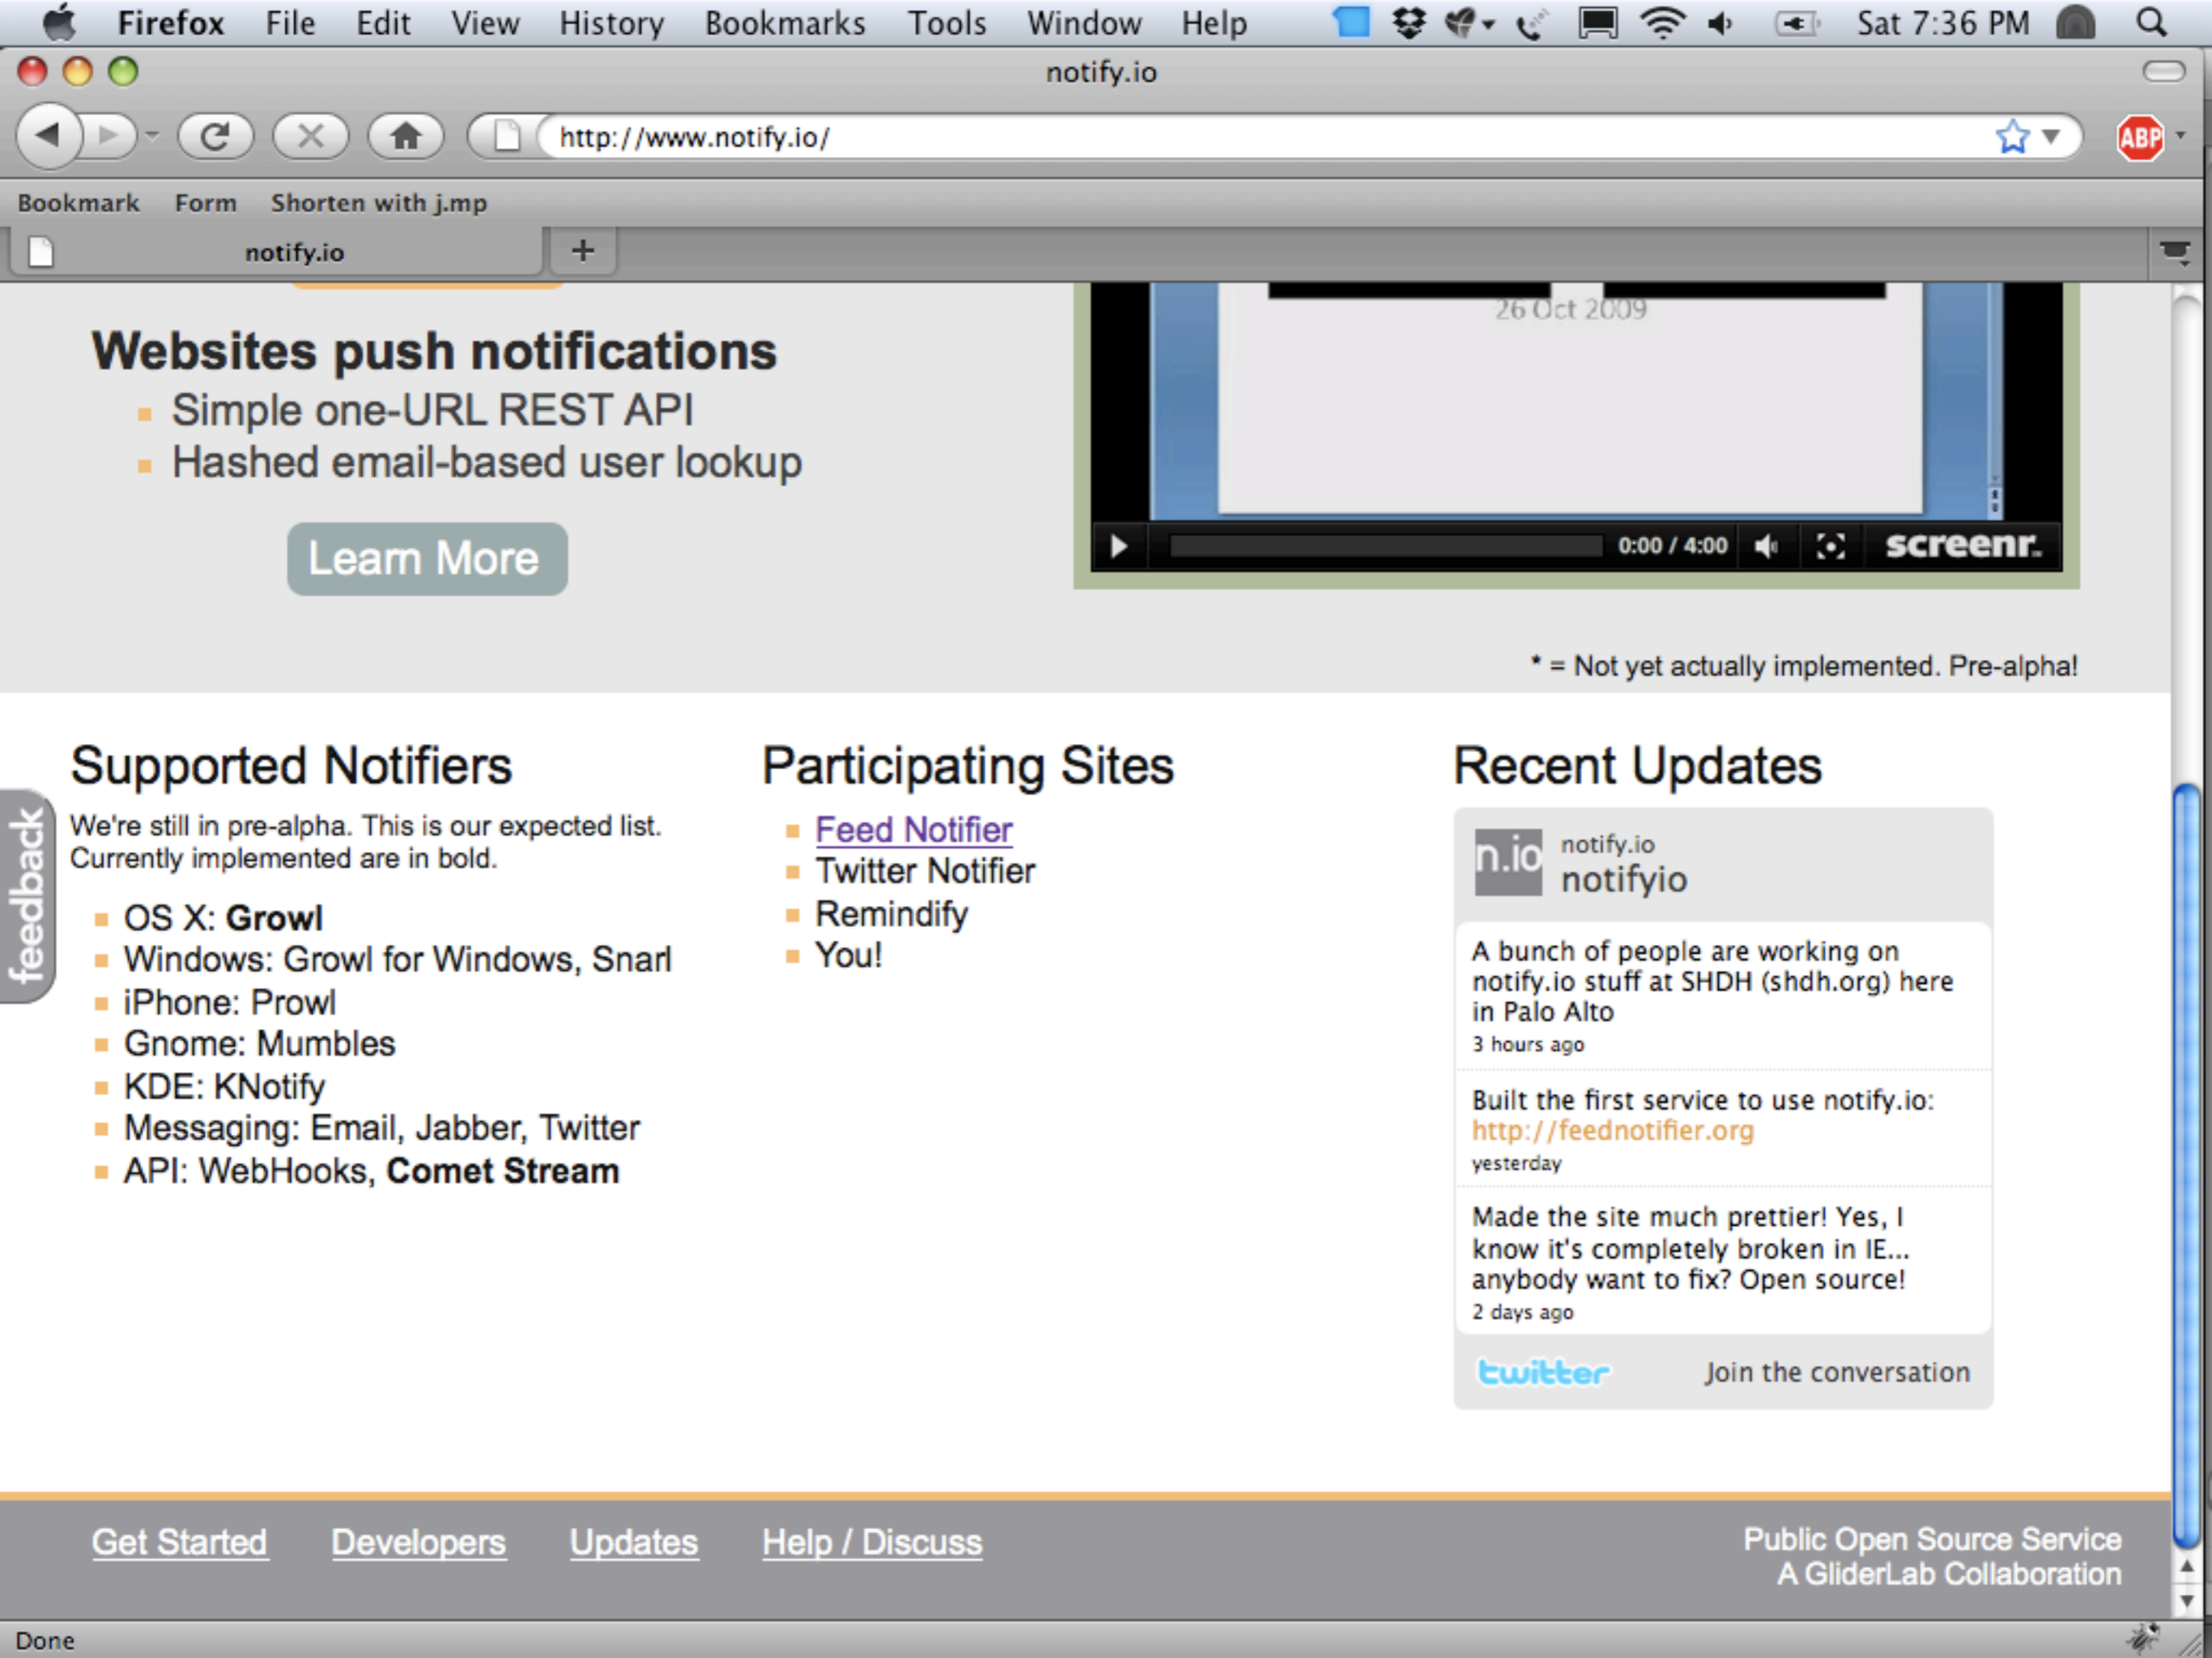

Websites push notifications

- Simple one-URL REST API
- Hashed email-based user lookup

[Learn More](#)

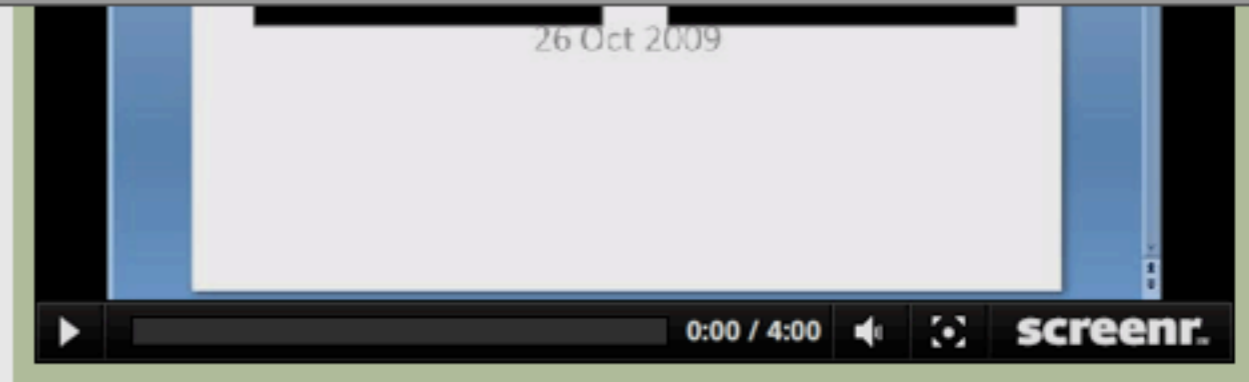

* = Not yet actually implemented. Pre-alpha!

Websites push notifications

- Simple one-URL REST API
- Hashed email-based user lookup

[Learn More](#)

* = Not yet actually implemented. Pre-alpha!

Supported Notifiers

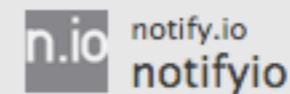

We're still in pre-alpha. This is our expected list. Currently implemented are in bold.

- OS X: **Growl**
- Windows: Growl for Windows, Snarl
- iPhone: Prowl
- Gnome: Mumbles
- KDE: KNotify
- Messaging: Email, Jabber, Twitter
- API: WebHooks, **Comet Stream**

Participating Sites

- [Feed Notifier](#)
- Twitter Notifier
- Remindify
- You!

Recent Updates

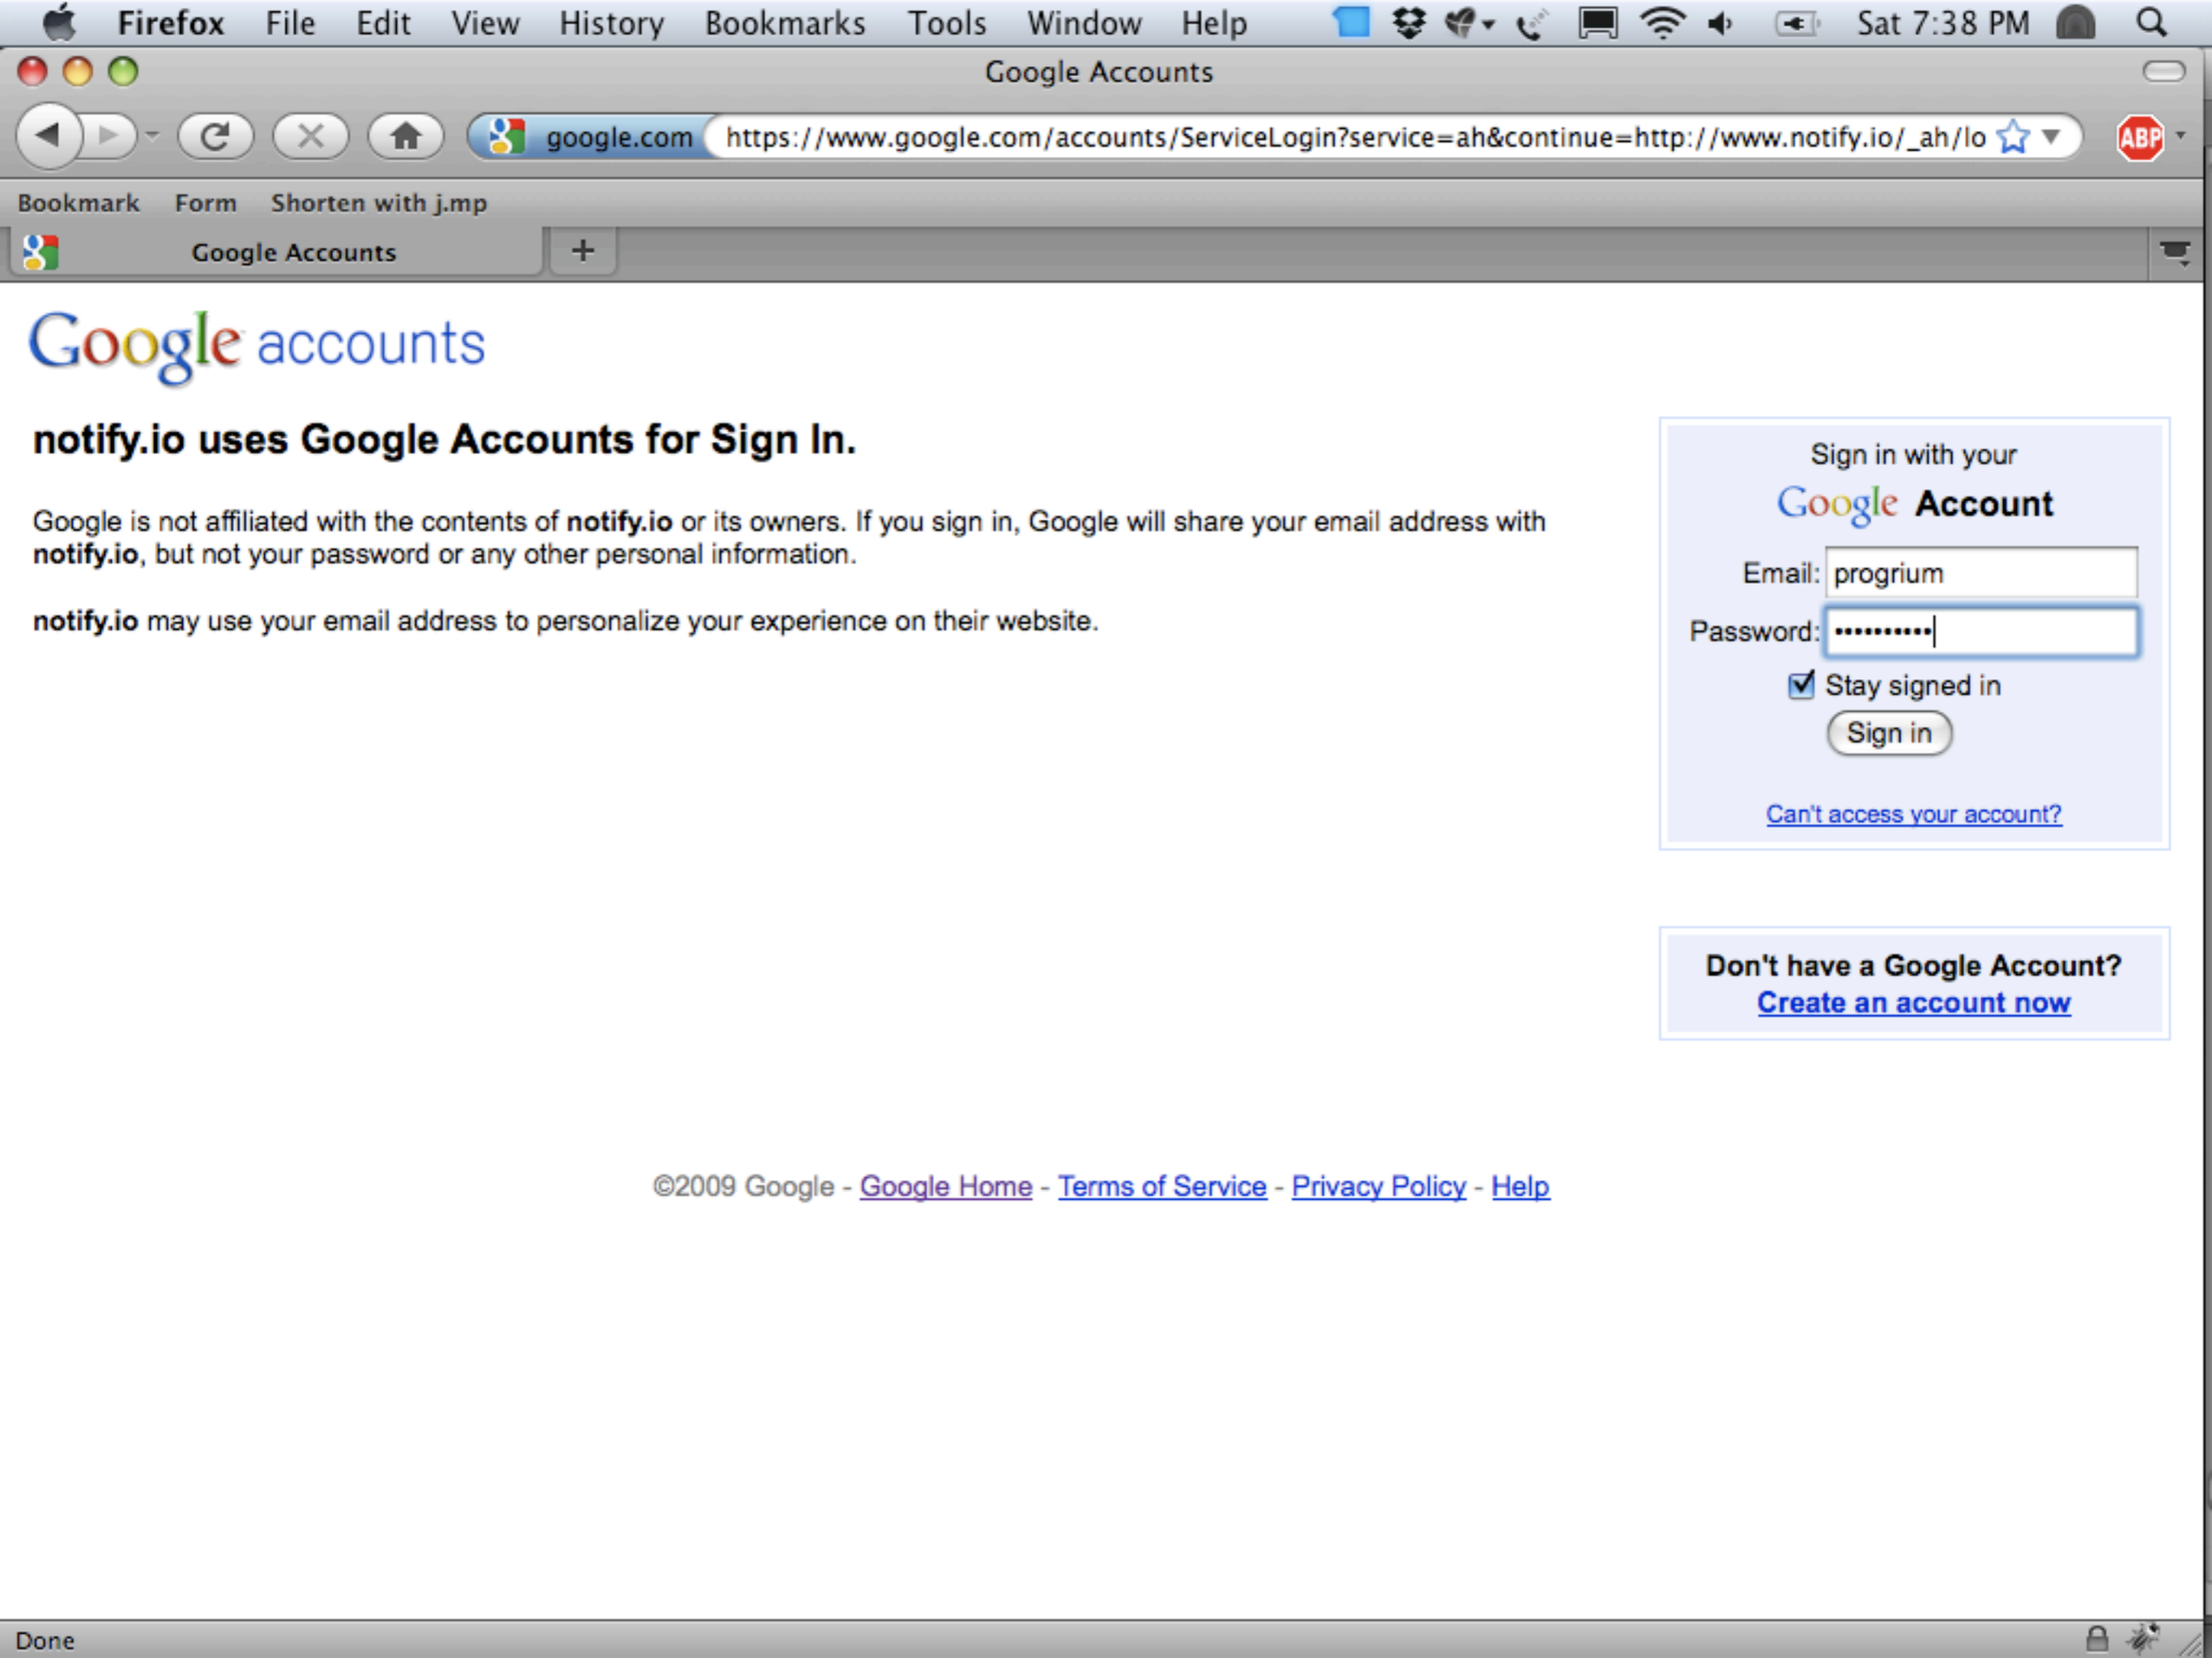

A bunch of people are working on notify.io stuff at SHDH (shdh.org) here in Palo Alto
3 hours ago

Built the first service to use notify.io:
<http://feednotifier.org>
yesterday

Made the site much prettier! Yes, I know it's completely broken in IE... anybody want to fix? Open source!
2 days ago

Notification Sources

Sources are notification senders. They are generally websites or web apps, but they can also be people. Anybody with a notify.io account can be a source. This page lets you manage your sources, allowing or disallowing their ability to send notifications and eventually being able to filter their notifications in various ways.

Enabled Sources

- Jeff Lindsay
- Feed Notifier
